

Antenatal Mōhio Report Update

Prepared by	Ashley Hulme – Chief Operations Officer Siobhan Matich – Clinical and Quality Manager
Endorsed by	Auckland PHO Senior Management Team
For the attention of	GPs, Nurse Practitioners and Practice Nurses
Date of launch	15 August 2025
Summary of the changes	<p>The Antenatal Register Mōhio report has been upgraded to accommodate a change in laboratory codes associated with the e-orders system.</p> <p>This report identifies people who have presented in the last 6 months for “Antenatal 1st Visit” blood screening, along with their immunisation history for Flu Vaccine, latest Boostrix, COVID Vaccine, Smoking Status and Smoking Cessation Referral.</p> <p>It is important to check this report regularly for accuracy, to exclude people who have aborted/terminated their pregnancy as the system is unable to qualify the patient list against maternity claims, midwifery or hospital maternity bookings.</p> <p>There are no other updates to the report layout, columns, or functions. The updated report will run monthly.</p>
